SUMMARY

Final-year Computer Science (Business Systems) student (CGPA 9.0) with four completed internships and seven shipped projects spanning full-stack development, AI and ML. Proven track record of taking projects from idea to deployed product, using React, Node.js, FastAPI/Flask, and Python-based ML/CV tooling. A fast learner who picks up new stacks quickly, works well in cross-functional teams, and is eager to bring that same energy to an entry-level software development role.

SKILLS

Languages: Python, JavaScript, C, C++

Frontend: React.js, HTML5, CSS3, Tailwind CSS, Vite, Figma

Backend: Node.js, Express.js, FastAPI, Flask, REST APIs, WebSockets, JWT Auth

Databases: MongoDB, SQL, Firebase, ChromaDB

AI / ML & Data: TensorFlow, Keras, ResNet50, OpenCV, LangChain, RAG, Pandas, YOLO, PyQt5

Core CS: Data Structures & Algorithms, OOP, Operating Systems, DBMS

Tools & Platforms: Git, GitHub, Postman, Power BI, MS Excel, Selenium, BeautifulSoup, Vercel, Render

EDUCATION

Misrimal Navajee Munoth Jain Engineering College

Expected Grad: 06/2027

B.Tech, Computer Science and Business Systems • CGPA: 9.0 • Chennai, Tamil Nadu, India

Indira Gandhi National Open University

Expected Grad: 06/2027

B.A., English Literature (Honours) • Chennai, Tamil Nadu, India

EXPERIENCE

Software Developer Intern — [DonutTech Private Limited](#)

Aug 2025 – Oct 2025

- Modernized the company website end-to-end, collaborating with cross-functional teams to debug, test, and enhance user-facing modules built with React, HTML, CSS, and JavaScript.
- Contributed to an AI-Powered IT Return Support Service Agent by building browser-level automation with Python, Selenium, and BeautifulSoup, optimizing the client-side experience within the Chromium environment.

Web Developer Intern — [Sortyx Ventures Private Limited](#)

Jul 2025 – Aug 2025

- Built multiple internal dashboards and contributed to the e-commerce website for [YuvalIoT](#) using React, HTML, CSS, JavaScript, and Figma.
- Scraped large volumes of sensor data from The Things Network (TTN) into Firebase and used a YOLO model with PyQt5 to help automate a smart-bin IoT prototype.
- Redesigned the company logo and product catalogue in Figma.

Android Developer Intern (Trainee) — [Prodigy InfoTech](#)

Apr 2025

- Built [Android utility apps](#) (Calculator, To-Do Manager, Tic-Tac-Toe) backed by Express.js and REST APIs, handling asynchronous operations and error recovery for a smooth user experience.

Machine Learning Intern (Trainee) — [Retech Solutions](#)

Feb 2025 – Mar 2025

- Worked on computer-vision and deep-learning tasks using Python, OpenCV, and TensorFlow as part of an introductory ML training program.

PROJECTS

Zozu — **Browser-Based Photobooth App** | [React](#), [Vite](#), [Flask](#), [Cloudinary](#)

- Built a webcam-based photobooth that runs an auto-countdown sequence to capture three photos in a row with a flash effect, then composes them into a styled polaroid-style strip using react-webcam and html-to-image.
- Designed three selectable theme filters (Coral Sunset, Ocean Dream, Retro Beach) with custom CSS, and added a one-click PNG download of the final photo strip.
- Built a Flask backend that uploads the exported strip to Cloudinary and returns a shareable URL, which is converted into a QR code on the frontend so users can scan it to get their photos on mobile. Live demo: zozu-photobooth.vercel.app.

LogisticAI — AI-Powered Final-Mile Route Optimization Dashboard | *React, FastAPI, Reinforcement Learning, MongoDB*

- Built a full-stack logistics dispatch dashboard with an interactive Leaflet map where users can click to drop delivery waypoints, set time-window constraints, and assign High/Medium/Low criticality levels to each location.
- Designed a custom reinforcement-learning route optimizer combining a Q-learning-inspired greedy phase, which scores and selects the next stop using a reward function balancing criticality, distance, and time-window violations, with up to 50 iterations of 2-opt local search to shorten the route, while modeling real-world conditions (traffic, rain, snow, fog, construction, road closures) as severity multipliers on travel time and computing a 0-100 feasibility score shown alongside total distance, ETA, and route warnings.
- Implemented a FastAPI + WebSocket backend for real-time updates and a live activity feed, with MongoDB Atlas persistence and automatic in-memory fallback so the app runs without a database.
- Added a one-click demo loader with 8 pre-seeded NYC locations and session persistence so the map state survives page refresh; deployed frontend on Vercel and backend on Render. Live demo: logistic-ai-swart.vercel.app.

Quill — My AI Agent | *React, LangChain, RAG, ChromaDB*

- Built a retrieval-augmented generation (RAG) chatbot that answers questions about my projects, skills, and background by embedding [my portfolio](#) content into ChromaDB and querying it through a LangChain pipeline.
- Built a React-based chat interface for natural conversation with the bot, and structured the retrieval pipeline to be easily extended with new data sources.
- Currently in active development on GitHub; next milestone (v2) will extend Quill into a writing-assistant tool that helps writers refine and develop their work. Live demo: quill-aiagent.vercel.app.

Aircraft Detection System | *Python, OpenCV, NumPy, SciPy*

- Built an aircraft detection pipeline using OpenCV (CV2) for object identification in aerial imagery, applying motion analysis techniques to distinguish aircraft from background elements.
- Applied preprocessing steps including image enhancement, noise reduction, edge detection, and feature extraction (using NumPy and SciPy) to improve detection accuracy and reduce false positives.

Fabric Type Classifier | *Python, TensorFlow, Keras, ResNet50*

- Built a fabric-type classification model in TensorFlow/Keras using transfer learning on a pretrained ResNet50 backbone, fine-tuned on a custom image dataset of fabric types and applied data augmentation (rotation, flipping, scaling, brightness adjustment) to reduce overfitting, then ran hyperparameter tuning and validation to optimize classification.

Multimodal Emotion Analyzer | *Python, OpenCV, NLTK, VADER*

- Built a multimodal sentiment-analysis pipeline that combines text-based emotion scoring (NLTK, VADER, tokenization, stop-word removal) with facial expression detection (OpenCV, FER) to produce a combined sentiment result.
- Visualized results with Pandas and Matplotlib to compare text-derived and image-derived sentiment across inputs.

CERTIFICATIONS

- [Python for Data Science \(Silver Elite\)](#) — NPTEL, IIT Madras
- [Python Programming](#) — Infosys Springboard
- [Linux Programming](#) — Academic internship via Anna University, Guindy
- [AI Developments Bootcamp](#) — Smarted
- [Advanced Diploma in Python Programming](#) — CSC Computer Education Pvt. Ltd.
- Advanced Diploma in [Music](#) and [Violin](#) — BSS University

ADDITIONAL INFORMATION

- Published author: co-authored the anthology [“Hidden Beads”](#) (available on [Amazon](#)); currently writing a novel and active on Medium and Goodreads.
- Professionally [certified classical dancer](#) and [Hindi Praveshika](#) certified.
- Global Star 2024 title (American Institute of Culture and Management) for [Vocal](#) and [Violin](#); [Violin Grade V](#) (Annamalai University).
- [Karate black belt](#) and [silver medalist](#) at the 38th State Tournament; [1st place in Kata](#) (South Indian Championship) and [2nd place in Kata](#) (International Championship).
- Zonal-level [football champion](#); participant in the [Guinness World Records](#) and the India & Asia Book of Records.
- Completed a [UI/UX Design internship](#) at TechVedhu.
